CRESSWELL COLLECTION

Phylactaria terrestris (Ehrb.) Big. & Guill.

115. a tall grassy species, brought in by the girls from a walk to Paradise. The pileus is delicately colored purple in the center and light brown with a purple tinge at the edges. The substance of the pileus is thin and the gills which are distant show through. Stem not so brittle as the pileus hollow purple, the whole plant is rather rigid in appearance.
